goPLIMS^{PM}

PROJECT MANAGEMENT SOLUTIONS

An Integrated Project Management Solutions Platform
that Drives Successful Results

About goPLIMS

The What, When and How of goPLIMS

A team-based **Project Management Platform**, **goPLIMS^{PM}**, offers centralised solutions with its diverse modules designed to streamline processes, facilitate collaboration, enhance communication among cross-functional teams and improve visibility. The suite of solutions has been developed based on practical hand-on experience with constant enhancements based on active feedback.

The SaaS platform, **goPLIMS^{PM}**, offers multiple benefits including cost savings, scalability, accessibility, improve productivity, real time reporting etc. The platform supports effective team collaboration and allows senior management to centrally track current progress, monitor performance, streamline communication and maximise resource utilisation.

The **goPLIMS^{PM}** modules integrate internal and external teams seamlessly. The modules have been developed with inbuilt data integrity & security for highly regulated industries such as life sciences, fine chemicals semiconductors and nuclear.

Managing cross-functional teams has never been easier

Integrate – Collaborate - Deliver

INTEGRATE

- Document all work flow details dynamically
- Centrally manage multiple modules & workstreams
- Connect internal / external global teams
- Optimise leadership & communication

COLLABORATE

- Collaborate globally, 24/7 on laptop/mobile
- Utilise a language of your choice, automatically translates
- Assign access levels in each module/ workstream
- Empower and enable teams to self-manage

DELIVER

- Get real time status & visibility, 24 X 7
- Support continuous improvement to all teams
- Monitor teams' KPI's based on historical data
- Enhance productivity, reduce cost and achieve efficiency

Empowering with Technology

Common challenges impacting project outcome

Time Management Increased Spend

- Scheduled delays
- Multiple trackers
- Non-productive hours

Trust Unreliable data

- Inaccurate data
- Loss of data
- Data breach

Empowerment Communication hurdle

- Language barrier
- Inability to self manage
- Inability to collaborate

Our Solution:

The key value of implementing **goPLIMS^{PM}** for project management are:

Time Management

- Early Warning
- Web & Mobile Platform
- Visualise your workflow

Trust

- Data Security
- Data Integrity
- Access restriction

Empowerment

- Self Manage & multilingual
- Globally collaborate
- Timely reminders

Benefits:

Increase Productivity

Reduce Resource Cost

Increase Collaboration

Access 24/7

ActionR

Taking Task Management to a New Level

Designed with diverse teams in mind, ActionR makes managing actions/tasks simpler and traceable based on each topic. Collaborate, coordinate, and complete actions in real-time around the globe. Use it to link actions/tasks, increase productivity and reduce costs. Manage all your actions, tasks and sub-tasks in dedicated workstreams, customise your workflow, visualise your work with Kanban & move actions between multiple lanes. Centrally manage & automate meetings minutes and create customised reports – all in real time.

Boost productivity, get organised, work more efficiently and eliminate non-productive hours.

PLAN

- Assign actions, tasks & sub-tasks
- Centrally manage multiple modules & workstreams
- Schedule and micro-schedule actions/ tasks
- Provide incremental updates until closure

TRACK

- Track topic wise incremental status & updates in real-time
- Visualise workflow with Kanban
- Resolve issues on time to minimise impact
- Monitor KPI's and Team hours spent

CONTROL

- Never miss any incomplete actions / tasks
- Identify issues early with dynamic dashboards
- Manage multiple teams within each workstream in silos
- Resolve issues on time to minimise impact

RFI-M

The Reliable Central Repository for Information

Efficiently and centrally manage diverse team's Requests for Information. Identify, Clarify, and Confirm details in a centralised repository to streamline workflow, communication and collaboration. Coordinate cross functional teams to centrally manage all RFI's. Initiate the query, collaborate between internal and external teams to resolve all queries, in real time. Assign actions, tasks & sub-tasks. Empower team to self-manage Schedule activities Visualise workflow Manage across boundaries.

Centrally collaborate cross-functional teams, sort out all information gaps to clarify ambiguities. Document individual updates while maintaining all details & reports for future reference.

Collaborate internal and external teams and centrally and formally manage topic wise queries.

INITIATE

- Create the query based on requirements
- Collaborate with all involved teams
- Collaborate with global teams centrally
- Focus teams to close query with set deadlines

CLARIFY

- Clarify all queries with supporting attachments
- Maintain topicwise query and discussion tree
- Track status of each RFI status & updates
- Resolve issues/bottlenecks online & on-time and monitor efficiencies

COMPLETE

- Track and resolve all queries/ issues on-time
- Maintain and reference the RFI anytime during the lifecycle
- Support the project and compliance management requirements
- Improve teams collaboration and eliminate ambiguity

PUNCHM

The Go-to Defect Management Tracking System

PunchM is a comprehensive module for managing, organising and resolving issues, snags, and defects at different stages of the project. By providing detailed descriptions (with a system number & name), assigning the defect to the executer, and tracking the progress of defects to closure, the PunchM platform makes it easier for System Owners & Project Managers to follow the progress until successful completion. Proof of work completion can be easily attached from the mobile. Sort issues by systems and create easy reports.

Organise and manage all the project punch lists, resolve issues timely, get instant status updates, reduce coordination, prioritise tasks. Empower teams to self-manage with their mobile to enhance accountability, efficiency and productivity.

Improve communications, enhance accountability, ensure traceability and increase productivity.

DEFINE

- Initiate snags, defects and punch lists
- Define priority or category and document expectations
- Assign the works directly to the executer
- Set and monitor deadlines for completion

ORGANISE

- Track topic wise incremental status & updates in realtime
- Prioritise actions and tasks based on schedule requirements
- Monitor and provide updates on site with mobile access
- Support the project and compliance management requirements

FINISH

- Minimise coordination and provide proof of completion online
- Track and maintain systemwise snags/defects until completion
- Monitor teams' KPI's based on historical data
- Support continuous improvement

CHANGEM

Manage changes more efficiently

ChangeM, incorporated with digital signature, provides a consistent & systematic approach to formally and centrally managing all the changes during the work / project management.

Initiate changes, effectively evaluate & review, collaborate electronic signatures for pre-approvals and post-approvals, easily add all attachments and execute these changes, all on our online compliant ChangeM platform.

Demonstrate compliance, eliminate errors and digitally manage and track in real time.

Increase productivity and simplify complex tasks, centralize monitoring, resolve issues, and boost workflow efficiency.

SUBMIT

- Specify all details of the change
- List all documents/drawings impacted by the change
- Categorise the change based on impact
- Identify all stakeholders for approval through electronic signatures

IMPLEMENT

- Implement in the sequence listed
- Update all relevant drawings/ documents
- Monitor online the current status of the change
- Collate the proof of all actions completed

CLOSE-OUT

- Verify and confirm all deliverables are met
- Document all updates online with references
- Sequence all signatures for post approval
- Index and maintain the details of all changes

DEVIATEM

The digital Deviation Management system

DeviatEM, incorporated with digital signature, provides an online platform to systematically manage the exceptions or deviations during the project management phases. Ensure all the exceptions/deviations are effectively managed on our digital platform, meeting the compliance requirements.

Identify, investigate, easily add all attachments, on our online compliant DeviatEM platform

Improve reporting, eliminate hassles, digitally manage and track in real time.

Increase productivity and simplify complex tasks, centralize monitoring, resolve issues, and boost workflow efficiency.

IDENTIFY

- Document all non-conformances identified in relevant test documents
- Assess and categorise the impact of every deviation
- Document all the details leading to the deviation
- Identify all stakeholders for approval through electronic signatures

INVESTIGATE

- Detail all the observations including adding attachments
- List and follow up all the actions for deviation closure
- Reference the change management if applicable
- Document the comments and actions initiated by pre-approvers

CONCLUDE

- Verify and confirm that the deviations has been formally closed
- Document all updates online with references
- Sequence all signatures for post approval
- Create a report of each deviation along with respective attachments

TRACKR

Get the big picture with TrackR

TrackR provides an access-controlled online tracking system that enables you to monitor and track projects with ease, offering real-time status updates 24/7. Create multiple trackers and easily navigate between them, keeping everything organized and on track.

Improve visibility, boost collaboration, and ensure seamless alignment across teams to drive better results.

Drive efficiency, stay on track and visualise in real time.

With TrackR, you empower your teams to stay focused, drive efficiency, and visualize progress in real-time, ultimately helping them to deliver on objectives faster and more effectively.

PRESCRIBE

- Customise individual trackers based on requirement
- Configure the fields based on requirements
- Define suitable format for each cell
- Define access privileges for each Tracker

COLLECT

- Update status centrally online
- Centrally maintain the current status
- Monitor and track progress
- Get instant health check on the overall status

TRACK

- Integrate and collaborate global teams with central tracker
- Engage diverse teams visually with the overall bigger picture
- Document all events and delays on an ongoing basis
- Clear bottlenecks on time to avoid delay

EDOCM

Streamline Document Management with EDocM

EDocM is a centralised, access-controlled document management system seamlessly integrated into your project and work management platform. It allows both internal and external team members to easily share, track, and manage electronic files in one secure location.

With EDocM, you can create multiple folders, define access levels based on project management roles, and efficiently organize all documents.

Easily organise, centrally manage and improve productivity & efficiency.

EDocM boosts productivity, reduces time spent searching for files, and improves overall efficiency, enabling your teams to work smarter and stay focused on what matters most.

SETUP

- Create the required folder structure
- Customise the folder structure per Workstream
- Assign access controls to team at each folder level
- Define access privileges for each user

INTEGRATE

- Collaborate with internal and external teams
- Maintain the central platform up to date
- Maintain compliance and content governance
- Retain all documents in central platform

MANAGE

- Avoid documents scattered in multiple inboxes and emails
- Centrally manage all types of documents
- Move files and folders
- Protect documents from misuse

WHY CHOOSE US?

With no requirement for software installation, our ready to use platform is unique:

- Dedicated server for each client
- Data integrity, security and audit trail
- Customisable and personalised dashboards
- Centrally manage multiple projects & workstreams
- Define user access in each workstream
- Language selection to support global teams
- Implementation support and training
- Integrated Meeting Minutes

Client Testimonials

"The platform has helped the cross-functional teams in complete tracking and coordinating all major activities. The 'Punchlist Management' platform has helped in managing the entire construction and commissioning punch list in the central platform. The central management of 'Request for Information' platform has helped central and compliant management of RFI with the vendor and cross-functional teams."

Haroon Sidiqqi - Head of Project & Engineering

"goPLIMS has exceeded our expectations in every aspect. It's not just a software platform; it's a partner in our success. I would highly recommend goPLIMS to any organization looking to elevate their workflow management to the next level."

Ajay Dubey – VP Business Development - DDE

I How is goPLIMS unique

- Dedicated cloud for each client
- Inbuilt data integrity, security
- Team based platform
- Integrated meeting minutes
- Dynamic automation & scheduling
- Centrally manage mutiple workstreams
